

# NFT Minting Platform

An idea for Apprentices and Corda Newbies to learn about how to use the concepts of Corda to build an offering.

It's following the current NFT craze whereby a Art piece gets its' NFT (basically a receipt) and then the NFT gets sold and can be resold instead of the physical Art piece.

In this example (1) we're using Corda States and Corda Contracts to create the NFT so that the Artist can give it a name, price in CHF and potentially other attributes.

(2) Then we extend the signing requirements to also ask the Art Registry to sign an NFT creation and finally we use the <https://github.com/corda/token-sdk> to issue CHF from the Bank to the Customer with which it can then buy Art NFTs from the Artist.
